# Program in Czech

---

UJOP students are accepted into programmes in General Medicine, Dentistry, and Pharmacy. Preparation for Czech-taught programmes has its own specifics.

If you want to study medicine in Czech for free, you need:

- Czech language at B2 level (general vocabulary) and C1 level (medical terminology)
- To pass entrance exams in Chemistry, Biology, and Physics
- Students who already speak a Slavic language (such as Ukrainian or Bulgarian) can usually reach this level within one year by joining our [COMPLEX](#) programme.

If you do not speak a Slavic language, your results will mostly depend on your motivation, effort, and previous knowledge. But don't worry – we'll support you every step of the way!

If you reach B1 level in your first year, you can continue in our [PROGRESS](#) course, which starts at B1 and leads to B2 with medical terminology at C1.

## Course Instructors

Ing. Jaroslava Bažantová, an esteemed biology instructor from the UJOP Medicine and Pharmacy Foundation Programmes, as she shares invaluable insights for securing your place in medical school.
